

# SQL DATA TYPES & OPERATIONS

# Learning Goals

By the end of this lecture students should be able to:

- ✓ Understand about the different types of data we can collect
- ✓ Use these data types while creating your tables
- ✓ Choose a appropriate data type for a table column based on your requirement
- ✓ Use operators to specify conditions in an SQL statement

**!= or <>**

# Table of contents

Quiz

# MS SQL SERVER DATA TYPES

# Ms SQL Server Data Types

## Student:

- ✓ Name
- ✓ Birthday
- ✓ Sex
- ✓ Address
- ✓ Marks...

Storage

***What type of data each of field ???.....***

# Ms SQL Server Data Types

 **SQL Server supports below data types. NULL is default value for most data type:**

- ✓ Exact Numerics
- ✓ Approximate Numerics
- ✓ Date and Time
- ✓ Character Strings
- ✓ Unicode Character Strings
- ✓ Binary Strings
- ✓ Other Data Types

# Exact Numbers

 *Integer-based data type*

Data type	Size	Range of values
<b>Bigint</b>	8 Bytes	$-2^{63}$ to $2^{63}-1$
<b>Int</b>	4 Bytes	$-2^{31}$ to $2^{31}-1$
<b>Smallint</b>	2 Bytes	$-2^{15}$ to $2^{15} - 1$
<b>Tinyint</b>	1 Byte	0 to 255
<b>Bit</b>	1 Bit	0 to 1

# Exact Numbers

## *Exact decimal-based data type*

Data type	Size	Range of values
<b>Decimal(p,s)</b>	5 - 17 Bytes (depending on precision)	- Varies based on precision setting. - Maximum values are $-10^{38} + 1$ through $10^{38} - 1$
<i>(p is the maximum number of all digits (both sides of the decimal point), s is the maximum number of digits after the decimal point)</i>		
<b>Numeric(p,s)</b>	...	Identical to <b>Decimal type</b>
<b>Smallmoney</b>	4 Bytes	- 214,748.3648 to 214,748.3647
<b>Money</b>	8 Bytes	- 922,337,203,685,477.5808 To 922,337,203,685,477.5807

# Approximate Numerics

Data type	Size	Range of values
Float	8 Bytes	- 1.79E+308 to 1.79E+308
<i>Depends on the value of n</i>		
Float(n)	If $1 \leq n \leq 24$ : 4 Bytes (Precision: 7 digits)	4 Bytes: - 3.40E + 38 to 3.40E + 38
	If $25 \leq n \leq 53$ : 8 Bytes (Precision: 15 digits)	8 Bytes: - 1.79E+308 to 1.79E+308
Real	...	- 3.40E + 38 to 3.40E + 38

**Note:** SQL Server treats  $n$  as one of two possible values. If  $1 \leq n \leq 24$ ,  $n$  is treated as **24**. If  $25 \leq n \leq 53$ ,  $n$  is treated as **53**.

Data Type	Description	Example
<b>Date</b>	Stores dates between January 1, 0001, and December 31, 9999	2008-01-15
<b>Datetime</b>	Stores dates and times between January 1, 1753, and December 31, 9999, with an accuracy of 3.33 milliseconds	2008-01-15 09:42:16.142
<b>Datetime2</b>	Stores date and times between January 1, 0001, and December 31, 9999, with an accuracy of 100 nanoseconds	2008-01-15 09:42:16.1420221
<b>Datetimeoffset</b>	Similar to the datetime2 data type, but also expects an offset designation of –14:00 to +14:00	2008-01-15 09:42:16.1420221 +05:00
<b>Smalldatetime</b>	Stores dates and times between January 1, 1900, and June 6, 2079, with an accuracy of 1 minute	2008-01-15 09:42:00
<b>Time</b>	Stores times with an accuracy of 100 nanoseconds	09:42:16.1420221

# Character Strings

## Non-Unicode string data types:

Data type	Description
<b>Char(n)</b>	<ul style="list-style-type: none"> <li>- Fixed-length</li> <li>- Maximum length of 8,000 characters (<math>1 \leq n \leq 8000</math>)</li> </ul>
<b>Varchar(n)</b>	<ul style="list-style-type: none"> <li>- Variable-length</li> <li>- Maximum of 8,000 characters (<math>1 \leq n \leq 8000</math>)</li> </ul>
<b>Varchar(max)</b>	<ul style="list-style-type: none"> <li>- Variable-length</li> <li>- Maximum length of 2,147,483,647 characters</li> </ul>
<b>Text</b>	<ul style="list-style-type: none"> <li>- Variable-length</li> <li>- Maximum length of 2,147,483,647 characters</li> <li>- Use varchar(max) instead</li> </ul>

# Unicode Character Strings

🌱 Unicode string data types are “double width”:

Data type	Description
<b>Nchar(n)</b>	<ul style="list-style-type: none"><li>- Fixed-length</li><li>- Maximum specified length is 4,000 characters (<math>1 \leq n \leq 4000</math>)</li></ul>
<b>Nvarchar(n)</b>	<ul style="list-style-type: none"><li>- Variable-length</li><li>- Maximum specified length is 4,000 characters (<math>1 \leq n \leq 4000</math>)</li></ul>
<b>Nvarchar(max)</b>	<ul style="list-style-type: none"><li>- Variable-length</li><li>- Maximum length of 1,073,741,823 characters</li></ul>
<b>Ntext</b>	<ul style="list-style-type: none"><li>- Variable-length</li><li>- Maximum length of 1,073,741,823 characters</li></ul>

# Binary Strings

Data type	Description
<b>Binary</b>	<ul style="list-style-type: none"> <li>- Fixed-length binary data</li> <li>- Maximum length of 8,000 bytes</li> </ul>
<b>Varbinary</b>	<ul style="list-style-type: none"> <li>- Variable length binary data</li> <li>- Maximum length of 8,000 bytes.</li> </ul>
<b>Image</b>	<ul style="list-style-type: none"> <li>- Variable length binary data</li> <li>- Maximum length of 2,147,483,647 bytes.</li> </ul>

Data Type	Description
<b>Timestamp</b>	Stores a database-wide unique number that gets updated every time a row gets updated
<b>Hierarchyid</b>	Special data type that maintains hierarchy positioning information
<b>Uniqueidentifier</b>	Stores a database-wide unique number that gets updated every time a row gets updated
<b>Sql_variant</b>	Stores values of various SQL Server-supported data types, except text, ntext, and timestamp
<b>Xml</b>	Stores XML data. You can store xml instances in a column or a variable (SQL Server 2005 only).
<b>Table</b>	Stores a result set for later processing

# SQL Operators

# What is an Operator in SQL?

-  An **operator** is a reserved word or a character used primarily in an SQL statement's WHERE clause to perform operation(s), such as comparisons and arithmetic operations.
-  Operators are used to specify conditions in an SQL statement and to serve as conjunctions for multiple conditions in a statement. Some types of most operators:
  -  1 Arithmetic operators
  -  2 Comparison operators
  -  3 Logical operators.

# SQL Arithmetic Operators

 Here is a list of the Arithmetic operators available in SQL

Operator	Description	Example
+	Addition	$a + b \rightarrow 30$
-	Subtraction	$a - b \rightarrow -10$
*	Multiplication	$a * b \rightarrow 200$
/	Division	$b / a \rightarrow 2$
%	Modulus	$b \% a \rightarrow 0$

( Assume variable **a** holds **10** and variable **b** holds **20**)

# SQL Comparison Operators

✿ Here is a list of all the Comparison operators available in SQL

Operator	Description	Operator	Description
=	equal to	>=	greater than or equal to
!=, <>	not equal to	<=	less than or equal to
<	less than	!<	not less than
>	greater than	!>	not greater than

## ❑ Example

ID	NAME	AGE	ADDRESS	SALARY
1	Ramesh	32	Ahmedabad	2000.00
2	Khilan	25	Delhi	1500.00
3	kaushik	23	Kota	2000.00
4	Chaitali	25	Mumbai	6500.00
5	Hardik	27	Bhopal	8500.00
6	Komal	22	MP	4500.00
7	Muffy	24	Indore	10000.00

CUSTOMERS TABLE

**SQL:** *SELECT \* FROM CUSTOMERS WHERE SALARY > 5000;*

ID	NAME	AGE	ADDRESS	SALARY
4	Chaitali	25	Mumbai	6500.00
5	Hardik	27	Bhopal	8500.00
7	Muffy	24	Indore	10000.00

# SQL Logical Operators

Operator	Description
ALL	• Used to compare a value to all values in another value set.
AND	• Used when both conditions are included
OR	• Used when either of the condition is true
ANY	• Used to compare a value to any applicable value in the list according to the condition
BETWEEN	• Used to limit the values in a range e.g.
EXISTS	• Used to search for the presence of a row in a specified table that meets certain criteria
IN	• Included in the list e.g.
LIKE	• Equal to some character (use quotes)
NOT	• Opposite of the logical value
IS NULL	• This checks if the field has a null
UNIQUE	• Searches every row of a specified table for uniqueness
